CCR Deadline to MSDH & Customers by July 1, 2017!

2016 Annual Drinking Water Quality Report Homestead Community Club, Inc. PWS#: 0570003 April 2017

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Miocene Series Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Homestead Water have received moderate susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact Tommy Roberts at 601-810-0037. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the second Tuesday of each month at 6:30 PM at 3044 HWY 98 E, McComb, MS.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detected during the period of January 1st to December 31st, 2016. In cases where monitoring wasn't required in 2016, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) – The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

				TEST R	ESULI	rs .		
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measure -ment	MCLG	MCL	Likely Source of Contamination
Inorgani	c Contai	minants						
Inorgani 8. Arsenic	c Contai	minants 2016	2.2	No Range	ppb	n/a	10	Erosion of natural deposits; runoff fror orchards; runoff from glass and electronics production wastes

13. Chromium	N	2016	.5	No Range	ppb	100		Discharge from steel and pulp mills; erosion of natural deposits
16. Fluoride	N	2016	.165	No Range	ppm	4		Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2012/14*	1	0	ppb	0		Corrosion of household plumbing systems, erosion of natural deposits
Disinfection			,	I No Pange	Loop	1 01		By-Product of drinking water
Disinfection 81. HAA5	on By	-Product	S 3	No Range	ppb	0	, 60	By-Product of drinking water disinfection.
			,	No Range	ppb	0	, 60 80	disinfection.

^{*} Most recent sample. No sample required for 2016.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. We did complete the monitoring requirements for bacteriological sampling that showed no coliform present. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Homestead Community Water Club works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

STATE OF MISSISSIPPI, COUNTY OF PIKE

PERSONALLY CAME before me, the undersigned, a notary public in and for PIKE County, Mississippi, the CLERK of the McCOMB ENTERPRISE-JOURNAL, a newspaper published in the City of McComb, Pike County, in said state who being duly sworn, deposes and says that the McCOMB ENTERPRISE-JOURNAL is a newspaper as defined and prescribed in Senate Bill No. 203 enacted at the regular session of the Mississippi Legislature of 1948, amending Section 1858, of the Mississippi Code of 1942, and that the publication of a notice, of which the annexed is a copy in the tomestend times consecutively, to wit: has been made in said paper ____ _____ day of ____ On the ____ On the ______, 20 _____ _____ day of ___ On the ____ On the _____ day of __ On the _____ day of ____ day of On the SWORN TO and subscribed before me, this Notary Public OF MISS My Commission Expires: June 19, 2017 KIM GOLDEN McComb, Miss. To McComb Enterprise-Journal TO PUBLISHING _ case of words space times and making proof, \$ 450. RECEIVED OF ___ payment in full of the above account.

Homestead Community Out. Inc. PWS#: 0570003 April 2017

Were pleased to present to you this year's Armais Quelly Where Report. This report is designed to inform you about the quality water and services we deliver to you severy day. Our constant goal is to provide you with a seds and dependable supply of dimining water. We want you to understand the districts was maked to continuely imprice the water treatment process are no pleased our water insources. We are committed to ensuring the quality of your water. Our water source is from weets drawing from the Moostes Series Aquifor.

The sourch water assessment has been completed for our public vertex system to determine the overall succeptibility of its difficing vertex supply to describe operation sources of conditionalists. A report containing determined on the consequently determinations were made has been furnished to your public vertex years and a suitable for viewing upon measure the seales for the homesteed Vision have received made our public vertex years and a realizable for viewing upon measure the seales for the homesteed Vision have received moderate susceptibility makings to combambration.

If you have any questions about this report or concerning your water utility, please contact Tommy Roberts at 801-810-9037. We want our valued customers to be informed about their water utility. If you want to learn more, please aftered any of our regularly scheduled meetings. They are held on the ascond Tuesday of each month at 8:30 PM at 5044 INVY 68 E, McComb, MS.

We coultively monitor for conteminants in your drawing water eccording to Fraderal and State leave. This table below tasts all of the drawing water conteminants that we descond during the period of January (** to December 23*, 20*); in course winter microlong waters required to 100, the bable evidence the court results, do wear to expect ower the surface of and or underground, if discovery of animals or from Internat suchly, microbial conteminants, such as well traveled on the substitutes of conteminant from the presence of animals or from Internat suchly, microbial conteminants, such as whose and beates, that may contening the period of the presence of animals; pesticides and technically experience period of the pesticides and technically water, may willing to require the such as safe and see some the naturally contening or results from unchanged the period of the pesticides and technically, which may come from a variety of sources such as applications, unter storm-water travell, and reconsisting experience of contenings, and and gas production, mind or processes and petrosem production, and can also come from pesticides and applic optionic products of inducting processes and petrosem production. The contening experience is the such as Sprooted to the contening which can be producted or before the server that is overtain the application of the period of the period of an also come from pesticides and explicit sprooters, related to water systems. All driving water, may be reasonably occurring the late to water systems. All driving water, may be reasonably occurring the processor that the water provided by public water systems. All driving water, may be reasonably occurring the content at least an end constituents. It important to manufact build be processed to the processed by indicate that the water provided as placed to the constituents.

In this table you will find many terms and adversarious you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, biggers treatment or other requirements which a water system must follow.

Maximum Contemtinant Level (MCL) - The "Maximum Allowed" (AICL) is the highest level of a contemtinant that is allowed in drinking water. MCLs are set so done to the MCLCs are treatible using the best available treatment fechnology.

Maximum Contembert Level Goal (MCLG) - The "Goal"(MCLG) is the level of a contaminent in chindrig water below which there is no frown or expected risk to health. MCLGs allow for a margin of safety.

Maximum Rosidual Distribution's Lavel (MFDL) — The highest level of a distributions allowed in drinking water. There is convincing evidence that addition of a distribution is necessary to control microbial conteminants.

Meximum Residual Disinfectant Level Goal (MFDLG) - The level of a driving water debriacism below which there is no known or expected risk of results. MFDLGs do not reflect the boundts of the use of debriectants to control microbial conteminents.
